

Sludge Bagging Drier

Solid Water SBD Sludge Bagging Drier Unit is an effective and economic system for small volume plants.

The complete turn-key unit consists of a semi-automatic **polymer flocculation system, polymer dosing pump, sludge feed pump, drum thickener** and **sludge bags arrangement**. Dewatered sludge is deposited into a bag and a container. Delivery includes 6 pieces of bag arrangements which can be removed and replaced.

A jute bag can be used to help improve soil when planting trees.

The primary material used in the sludge bagging drier unit is stainless or acid-proof steel (**AISI304, AISI316**).
